

ReCapture: Unlock high energy savings – Power Smarter

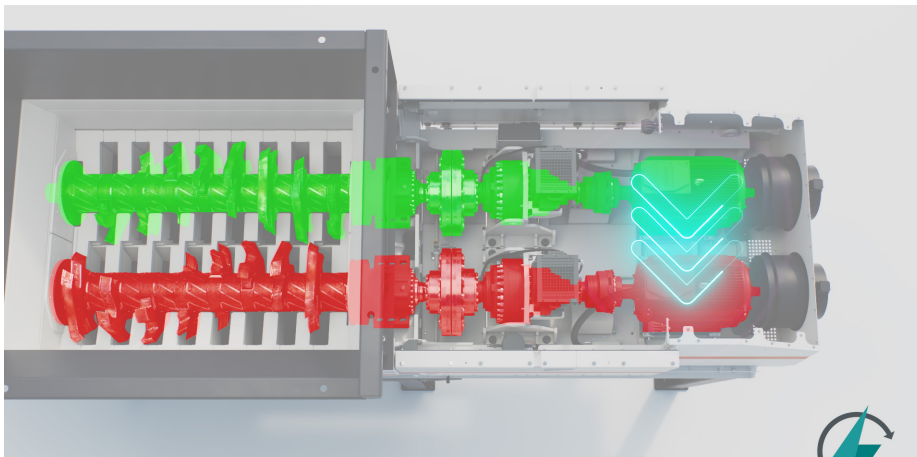

ReCapture

Advantages of ReCapture:

- Contributes up to 25% in energy savings of M&J e-drive
- Lower operational costs
- Reduced Carbon footprint

What's the solution?

The energy efficiency is maximized by using the energy from one motor to the other when reversing the shafts, this takes your energy savings to new heights.

Developed by the M&J's expert engineers, ReCapture intelligently harnesses the energy from one motor to power the other during shaft reversals, contributing up to 25% in energy savings of M&J e-drive – validated through on-site testing.

This breakthrough system not only lowers operational costs but also significantly reduces your carbon footprint. With seamless integration into M&J's advanced e-drive components, ReCapture takes the energy savings to new heights by extending the savings already obtained by replacing hydraulic shredders with e-drive shredders.
